		Claims		NO

#### 2. Citations and explanations

Document 1: JP 62-57808 A (Honda Motor Co., Ltd.), 13

March 1987

Document 2: Microfilm of the specification and drawings annexed to the Japanese Utility Model

Application No. 123716/1989 (Laid-open No. 62714/1991), 19 June 1991

Document 3: JP 59-64212 A (Andreas Meier), 12 April 1984

Document 4: JP 57-21213 A (Mitsubishi Metal Corporation), 3 February 1982

Document 5: JP 51-62475 A (Kobe Steel, Ltd.), 31 May 1976

### Claims 1 to 3

The invention set forth in claims 1 to 3 does not involve an inventive step in the light of documents 1 and 2 cited in the international search report and newly cited documents 3 to 5.

The "auxiliary blades (8, 10a, 10b)" of the prior art in document 1 (page 2, upper left column, lines 3 to 12; fig. 1 and 2) and the "recessed portion (5)" set forth in document 2 both correspond to the "notch with a groove bottom" of this application.

In addition, the groove surrounded by "inner side blades (52, 62, 72) and peaks (53, 63, 73)" disclosed in document 3 correspond to the "notch with a groove bottom"

of this application. In particular, page 2, upper right column, line 2 to lower left column, line 2 of document 3 sets forth a feature wherein such a structure acts as a chip separating piece.

Document 4 (page 3, upper left column, line 18 to upper right column, line 1) sets forth a feature wherein an arbitrarily-defined shape can be used as the bearing surface view of the groove which is provided to the central part of the blade tip of a drill bit, and document 5 (fig. 1) sets forth a "semicircular long hole shape".

It would be easy for a person skilled in the art to apply said feature to the inventions set forth in documents 1 to 3 to employ an arbitrarily-defined shape as the bearing surface view.

#### Claims 4 and 5

The invention set forth in claims 4 and 5 does not involve an inventive step in the light of documents 1 and 2 cited in the international search report and newly cited documents 3 to 5.

Document 1 (fig. 2 (a)), document 2 (description, page 4, lines 9 to 14) and document 3 (fig. 7) set forth a feature wherein the notch provided to the central part of the blade tip becomes wider from the deepest part.

Documents 1 to 5 do not set forth a feature wherein the notch is constituted in "an arc-shaped surface when viewed from the side", but it would be easy for a person skilled in the art to employ an arc surface shape as a shape wherein the groove increases in width from the deepest part.

(Document 5 (fig. 1) is acknowledged to be an arc surface shape when viewed from the side, depending on the direction.)

## INTERNATIONAL PREDMINARY EXAMINATION REPORT

In addition, documents 1 to 3 set forth a feature wherein three cutting blades are used, and the shape of the notch when viewed from the bottom is merely a design matter which a person skilled in the art could change as necessary.

## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

Internation optication No.
PCT/JP 03/13981

### VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Claim 5 received by the International Preliminary Examining Authority on 5 August 2004

The aforementioned claim 5 contains the wording "the drill bit set forth in one of claims 1 to 4", but if claim 5 is dependent on claim 3, this disclosure is inconsistent with a notch "with a three-lobed shape when viewed from the bearing surface".
